

The Assumptive Close

Sadaf sells more than anyone on the team. She also has the **lowest** checklist score of the three reps compared here — so the checklist isn't why she wins. What's different is the **shape** of her calls: a fixed script, and one line she says every single time, whether or not the customer asked for it.

This is a stage-by-stage look at where Sadaf's calls diverge from Sophiya's and Nida's — built from real transcripts, not guesses — plus specific things to try on the next call.

Sadaf — 27 enquiry calls · QA 40 · 158 total calls

Sophiya — 12 enquiry calls · QA 45 · 67 total calls

Nida — 20 enquiry calls · QA 42 · 116 total calls

Where the three calls diverge

Each row is one rep's call, left to right in order. Watch the arrow between **Price** and **Close** — that's the one hop where the pattern actually splits.

Same five stages, three reps. Everything up to Price looks similar — the split happens in one hop.

Stage by stage, in their own words

Real transcript lines (lightly paraphrased where needed for clarity), read across a sample of each rep's calls.

01 Opening

SADAF

"Hi [Name], this is Sadaf calling from The Kenko Life. You had made an inquiry for a meal subscription."

SOPHIYA

"I'm Sophia calling from The Kenko Life. I just received your inquiry regarding a healthy meal plan."

NIDA

"As you can see here, you have raised an inquiry on our website related to the meal subscription."

Sadaf's opener is **identical in every call read** — zero variation. That's not a better line, it's zero cognitive load: all her attention goes into listening to the answer, not remembering what to say next.

02 Discovery

SADAF

Two questions, same order, every call: delivery area, then "healthy balanced meals, or goal-oriented weight loss/gain?"

SOPHIYA

Often skips straight to "lunch, or lunch and dinner?" — the goal question gets dropped; location asked late or not at all on short calls.

NIDA

Leads with location like Sadaf, but spends several turns confirming address/landmark spelling before reaching the goal question.

Sadaf's discovery is short **on purpose** — two questions, then straight into the pitch while momentum is high. Nida's isn't wrong, it just runs long enough to cost that momentum before the pitch even starts.

03 Pitch

SADAF

Fixed four-part order, near-verbatim: macro/calorie-counted meals → nutritionist support "throughout the journey" + pause/carry-forward → 6-day delivery → cuisine variety if time allows.

SOPHIYA

Delivered piecemeal, answering the customer's own tangents as they come; volunteers extras (kitchen tour, the Kenko cafe) when the customer sounds engaged.

NIDA

Same content and order as Sadaf, but goes deepest on pause/carry-forward — walks the full 26-meal math turn by turn when asked.

This is the one stage where all three overlap the most — it's **not** where the real divergence happens.

04 Price

SADAF

States all three pricing tiers, unprompted, every time. She leads with it.

SOPHIYA

"What is the price for the 3 month plan?" – price only appears after the customer asks first.

NIDA

Proactive like Sadaf, often paired with a trial-plan option the moment she senses hesitation.

Sophiya is giving up initiative here. If the customer never asks, the call can end and they **never even hear the number**.

05 Transition to close

SADAF

"The next step would be the payment – I'll share the payment link with you... share a screenshot with me... then we'll have a consultation call with the nutritionist."

SOPHIYA

"Anyways, I'll send you a couple of details on your WhatsApp." (used near-verbatim three times – her default retreat)

NIDA

"I'll be pinging you the details on WhatsApp... confirm me whenever you're planning." In one call, the customer has to ask "so now I download the app and subscribe, is that how it works?" first.

This is the actual hinge. Sadaf says the **same closing line every time**, whether or not the customer signaled readiness. Sophiya and Nida only offer it — or wait to be asked.

06 Ending

SADAF

Mixed outcomes, but always an attempt: "allow me five minutes and I'll make the payment" – or a clean, fast disqualify: "we cannot deliver here... as soon as we start delivery we'll get in touch" (30 seconds, no wasted time).

SOPHIYA

"I'll let you know after discussing" / "I'll check and let you know" – open-loop, even in her strongest, most rapport-heavy call.

NIDA

Better at pinning a specific slot – "Monday evening you can call me" – but it's still a deferral, not a close.

Sadaf doesn't win every call — but she **never leaves it open**. Every call ends in a commitment or a clear no. That's what compounds over 158 calls.

07 Objections & hesitation

SADAF

Customer asks for a trial → immediately reprices to trial, no resistance. Raises delivery-app quality doubts → fires a ready hygiene/freshness answer, then goes straight back to price.

SOPHIYA

Disengages at the first sign of hesitation – no probing, no re-engagement. "Just checking" → WhatsApp retreat in under 60 seconds, three separate times.

NIDA

Patient and thorough on operational objections – but after resolving one, reverts to "I'll share details, confirm me" instead of re-attempting the ask.

For Sophiya and Nida, resolving the objection **ends** the interaction. For Sadaf, it's the moment right before she asks again.

What to try next

Specific to each of you, based on where your calls diverge from Sadaf's.

Sophiya

THREE THINGS TO CHANGE

1. **State price before they ask.** Right after the pitch, give all three tiers — don't wait for the question. A customer who doesn't ask isn't always uninterested; they may not know it's their turn to ask.
2. **Don't retreat to WhatsApp at the first hesitation.** When you hear "just checking," ask one more question first — "what's making you unsure, the price or the plan?" — before offering to send details.
3. **Replace the open-loop close.** Swap "I'll check and let you know" for a concrete next step: "the next step would be payment — I'll send the link now."

Nida

THREE THINGS TO CHANGE

1. **Convert resolved objections into a close attempt.** The moment you finish explaining pause/storage mechanics, ask for the sale immediately — don't let thoroughness be the last word.
2. **Say it before they ask.** Don't wait for "so how do I subscribe?" — lead with how payment works, every time, regardless of how engaged the customer sounds.

3. **Pair callbacks with a commitment.** Instead of a pure deferral, add something concrete:
"I'll have the payment link ready when we speak Monday."

Try this instead

Same moment, two ways to say it. Practice the right-hand line until it's automatic — that's the whole difference.

When the pitch is done and price is out

WHAT YOU SAY NOW

"I'll send you a couple of details on your WhatsApp."

TRY INSTEAD

"The next step would be payment — I'll share the payment link with you now, and we'll set up your first consultation call."

When the customer sounds interested but hasn't committed

WHAT YOU SAY NOW

"I'll be pinging you the details, confirm me whenever you're planning."

TRY INSTEAD

"Let's lock this in — I'll send the payment link now so your plan can start [date]."

Explaining how to actually sign up

WHAT YOU SAY NOW

(waiting for them to ask "so how do I subscribe?")

TRY INSTEAD

"Once you're ready it's simple – I send the app link, you download it, and payment happens right there."

Kenko Call Analysis – built from Callyzer → Sarvam transcripts, sales/enquiry calls only.
Sample: 8 Sadaf, 6 Sophiya, 6 Nida calls read in full, spanning QA 0–100.
